Geographic Distribution Visualization

Methodology & Confidence Levels

Data Sources: YouTube comments, video metadata, language detection, NER

Confidence Scoring:

- **High (0.7-0.9):** Direct city mentions, geocoded locations
- **Medium (0.5-0.7):** Country mentions, multiple weak signals
- **Low (0.3-0.5):** Language-based inference, timezone hints

Limitations: Estimates based on commenters only (not all viewers). Geographic mentions may not represent actual viewer location. Results should be interpreted as indicative trends, not precise demographics.
